PROFESSIONAL SUMMARY

Computer Engineering Technology graduate (TUP Manila) and Cloud Platform / Site Reliability Engineer (SRE) with practical software development background and extensive expertise in multi-cloud Kubernetes provisioning (GKE, AKS, DigitalOcean DOKS), declarative Infrastructure as Code via Terraform, and pull-based GitOps workflows using ArgoCD and Kustomize v5. Proven capability in designing secure Zero-Trust architectures with Calico NetworkPolicies and Cloudflare Tunnels, alongside tuning production observability stacks (Prometheus, Grafana, Loki, Grafana Alloy, cAdvisor). Adept at building robust CI/CD pipelines with GitHub Actions, Trivy vulnerability scanning, and automated developer tooling.

TECHNICAL SKILLS

Kubernetes (K8s) • Google Kubernetes Engine (GKE) • Azure Kubernetes Service (AKS) • DigitalOcean Kubernetes (DOKS) • Terraform (IaC) • ArgoCD • Kustomize v5 • GitOps • GitHub Actions • Docker (Multi-Stage) • Trivy Scanner • Google Workload Identity (WIF) • Calico NetworkPolicies • Cloudflare Zero-Trust Tunnels • Kubernetes Pod Security Standards (PSS) • Prometheus • Grafana • Loki • Grafana Alloy • cAdvisor Scrape Tuning • Node Exporter • GNU Makefiles • SRE Best Practices

PROFESSIONAL EXPERIENCE

Software Developer Intern (SandHub API) **Feb 2026 – June 2026**
InfoTouch Corporation *Makati, Metro Manila, Philippines*

- Collaborated within an agile software development team under the mentorship of a senior developer, actively participating in code reviews, daily stand-ups, and pull request merges via Git.
- Configured Serilog for structured, context-enriched logging, providing deep observability into application behavior and unhandled exceptions.
- Traced cross-stack execution flows from the frontend UI down to the backend database layer to isolate and debug critical application errors.
- Conducted internal API performance testing to identify slow endpoints and validate response times under simulated load.

Adviser I, Sales (MSS Sales Representative) **July 2024 – Nov 2024**
Concentrix *Mandaluyong, Metro Manila, Philippines*

- Managed high-volume inbound technical support inquiries, network connectivity issues, and billing disputes for a major telecommunications account under strict Service Level Agreement (SLA) deadlines.
- De-escalated dissatisfied clients through structured root-cause analysis, active listening, and cross-functional problem solving under high-pressure operating conditions.

PROJECTS

IoT-Based Fire Monitoring & Cloud-Native Analytics Platform | *Kubernetes (GKE/AKS/DOKS), Terraform, ArgoCD, Kustomize, Prometheus, Grafana* **Aug 2025 – June 2026**
Project Leader, Lead Developer & Cloud Infrastructure Engineer

- Standardized Kubernetes manifests and Helm charts to guarantee cloud-agnostic portability, validating identical deployments across GKE, AKS, and DigitalOcean (DOKS).
- Developed a modular, 4-stage Terraform architecture (Bootstrap, Infra, Platform, GitOps) to strictly isolate state and minimize blast radius during infrastructure teardowns and updates.
- Transitioned deployment workflows to a Pull-based GitOps model using ArgoCD and Kustomize v5, orchestrating automated self-healing and zero configuration drift.
- Refactored monolithic Kubernetes manifests into decoupled, domain-driven Kustomize layers (`apps`, `data`, `networking`, `observability`), standardizing modern Kustomize v5 declarative syntax and eliminating deprecation warnings.
- Hardened CI/CD pipeline security in GitHub Actions by implementing OIDC Workload Identity Federation with GCP, eliminating long-lived service account keys.
- Secured Kubernetes public ingress by deploying Cloudflare Zero Trust Tunnels (cloudflared), closing all public inbound firewall ports and hiding the cluster behind edge security.
- Deployed an end-to-end Kubernetes observability stack combining Prometheus, Grafana, Grafana Alloy, and Loki; tuned cAdvisor scraping thresholds to prevent node OOM thrashing.
- Hardened container runtime security across all microservices by replacing root execution with dedicated, unprivileged system users (UID 1000 `node:node`, `simuser`) aligned with Kubernetes Pod Security Standards.
- Engineered a full-lifecycle Developer CLI via an advanced GNU Makefile supporting 5 SDLC environments: local Docker Compose, Kind Kubernetes, Staging (GKE Dev via ArgoCD), and guarded Production.

Autonomous AI Job Email Agent | *GitHub Actions (CI/CD), Terraform (IaC), Python, Serverless* **Sept 2026**
DevOps & AI Automation Engineer

- Architected a serverless Python agent executed via GitHub Actions cron pipelines to autonomously scan and classify recruiter communications 24/7 over IMAP SSL.
- Provisioned CI/CD workflows and repository secrets declaratively using Terraform with the GitHub provider, enforcing Infrastructure as Code and zero hardcoded credentials.
- Automated the agent on a GitHub Actions cron schedule with actions/cache to persist UID state between runs, eliminating the need for a database.

Jobflow: AI-Powered ATS Resume Builder & Job Pipeline | *Docker, Docker Compose, Alembic Migrations, Playwright, FastAPI* **Aug 2026 – Present**
Full-Stack & AI Engineer

- Containerized the full-stack FastAPI application using Docker and docker-compose, scripting automated pre-boot health checks and Alembic schema migrations.
- Engineered a Playwright job scraper with native browser cookie injection to seamlessly bypass login walls on LinkedIn and Indeed without manual authentication.
- Implemented a Kanban-style job tracking dashboard with session-based JWT authentication, allowing users to intuitively move applications through New, Approved, Applied, and Skipped states.

EDUCATION

Bachelor of Engineering Technology major in Computer Engineering Technology **Aug 2026**
Technological University of the Philippines (TUP) *Manila, Philippines*
